

In the Claims:

Claims 1-3 (Canceled)

Claim 4. (Currently Amended): A patient levitation apparatus for a patient comprising:  
a patient board having a patient side and a bottom; and  
a plenum member attached to the bottom of the board, wherein the plenum member is  
adapted to receive a flow of pressurized air through an intake port, the patient board having an  
intake port hole adapted for receiving the intake port, and the plenum member further adapted to  
release the flow through a plurality of holes in the plenum member to provide a layer of air  
below the patient board supporting the patient.

Claim 5 (Previously Added): The patient levitation apparatus of claim 4, wherein the  
plenum member further includes an intake port for receiving the flow of pressurized air.

Claim 6 (Canceled)

Claim 7 (Previously Added): The patient levitation apparatus of claim 4, wherein the  
flow of pressurized air is delivered from a blower motor through an air hose.

Claim 8-(New): A patient levitation apparatus for a patient comprising:  
a patient board having a patient side and a bottom; and  
a plenum member attached to the bottom of the board, wherein the plenum member is  
adapted to receive a flow of pressurized air and release the flow downwardly through a plurality  
of holes in the plenum member to provide a layer of air below the patient board supporting the  
patient.
